

**ABSTRACT OF THE DISCLOSURE**

A liftable independent suspension system which may also be steerable. In  
5 a described embodiment, a liftable suspension system for use on a vehicle  
includes wheel spindles positioned to extend outwardly at each respective lateral  
side of the vehicle. The spindles are displaceable independent of each other. An  
actuator is operable to raise at least one of the spindles, so that a tire rotatably  
connected to the spindle is liftable out of engagement with a road surface when  
10 the actuator raises the spindle.
